## **GraphicConverter FAQ No. 1**

## Question:

How do you disable the autosave feature of Lion (or later) in GraphicConverter 7 or later?

## The problem:

MacOS Lion and later does support autosave and versions. This cause a regular saving of all open documents after each little change. This can delay the work with large images.

So, GraphicConverter offers an option to disable autosave.

Go to the menu GraphicConverter/Preferences.

Select the Save icon and uncheck "Support auto save and versions".

Click on OK.

Quit GraphicConverter and relaunch GraphicConverter.

Thats all.
